Biochemistry describes how these molecules are made and the interactions between them at molecular level. Cell biology then goes on to describe how the biochemicals are organised into cells and cellular components, which then form the tissues of the body. Normal processes within the body are called physiological, whereas processes that

Cells constitutively expressing the GPX5 protein were generated and assayed for their ability to metabolize regular substrates of GPX enzymes. Data presented here show that the GPX5-expressing cells can metabolize hydrogen peroxide in a manner that is consistent with a peroxidase activity.
