Design optimization is an engineering design methodology using a mathematical formulation of a design problem to support selection of the optimal design among many alternatives. Design optimization involves the following stages:

- Variables: Describe the design alternatives
- Objective: Elected functional combination of variables
- Constraints:

Refining the Product Design. Engineering analysis and optimization starts with a well-detailed spec and with proof of principle builds that prove out the product's real-world requirements. This presents a starting point and a baseline for optimization. We can then optimize for
