Library Classification Facets And Analyses

Facet analysis builds classification from "the bottom up" on the basis of a detailed examination of the concepts in a given discipline or subject field. Concepts are assigned to a series of categories (or facets) which are largely functional, or linguistic in nature (entities, parts, materials, processes, operations, products, agents).

Facet analysis and its influence on the major systems of ...

A faceted classification is a classification scheme used in organizing knowledge into a systematic order. A faceted classification uses semantic categories, either general or subject-specific, that are combined to create the full classification entry. Many library classification systems use a combination of a fixed, enumerative taxonomy of concepts with subordinate facets that further refine the topic.

Faceted classification - Wikipedia

Several systems of classification have been developed to provide the type of access and control that a particular library and its clientele need. Generally, each system consists of a scheme that arranges knowledge in terms of stated principles into classes, then divisions and subdivisions.

The analysis of library catalogs showed that academic libraries were more likely to offer a facet-based OPAC than public libraries (78% to 54%). Though commercial systems heavily outnumbered opensource developments overall, VuFind, in particular, was a popular system for academic libraries.

Facet-based library catalogs: A survey of the landscape ...

Facets are chosen by librarians based on the metadata available to guide users around collections. Not every piece of metadata makes a good facet. There are guidelines for effective facets; for example, facets should be mutually exclusive, permanent, and represent clear divisions of the items.

Faceted Classification - an overview | ScienceDirect Topics

1.2 When to make a faceted classification. Facets will handle three or more dimensions of classification. When, for the purposes of the classification, it is possible to organize the entities by three or more mutually exclusive and jointly exhaustive categories, then facets are probably the appropriate classification.

How to Make a Faceted Classification and Put It On the Web ...

In the field of Library and Information Science (LIS), the theory of facet analysis owes its development to two sources: S. R. Ranganathan and the Classification Research Group (CRG). Ranganathan developed the theory of facet analysis because he was dissatisfied with the inability of traditional enumerative bibliographic classification systems to allow for the expression of compound subjects (Ranganathan 1962, 1967).

A Simplified Model for Facet Analysis - Information ...

Facet analysis is the process of breaking down a subject into its component parts, choosing appropriate terminology to express those parts, and conveying those aspects by means of a notational device (Spiteri, 1998). This method was originally devised by S. R. Ranganathan (1962) when describing colon classification, a faceted classification scheme.

What is Facet Analysis? - Tame Your Assets

library classification schemes In library: The Colon system He introduced the term facet analysis to denote the technique of dividing a complex subject into its several parts by relating them to a set of five fundamental categories of abstract notions, which he called personality, energy, matter, space, and time.
