B) Find the torque τ about the pivot due to the weight w of Gilles on the seesaw. Express your answer in terms of L_1 and w . $\Rightarrow \tau = -L_1 w$. C) Determine $\Sigma\tau$, the sum of the torques on the seesaw.

Consider only the torques exerted by the children. Express your answer in terms of W , w , L , and L_1 . $\Rightarrow \Sigma\tau = 0 = WL - wL_1$

Here, the torque depends on both the magnitude of force and on the distance from the axis of rotation at which it is applied

However because the forces are the same, the torque depends on the axis of rotationS A small force can produce the same torque as a large force, if it is applied farther
